The Archetypes And The Collective Unconscious (Collected Works Of C G Jung)

Researching the Unconscious provides an exposition of key issues in the philosophy and methods of the social sciences that are relevant to psychoanalysis, both as a clinical practice and as a human science. These include the debates initiated by Thomas Kuhn's theory of scientific revolutions, the "actor-network theory" of Bruno

Latour, the ideas of philosophical realism, distinctions between "meaningful" and "causal" explanation, and the relevance of complexity theory and "part-whole analysis" to psychoanalysis. The book goes on to discuss specific forms and methods of psychoanalytical research, including the role of case studies, of outcome research, and of "grounded theory" as a key methodological resource, of which it provides a detailed example. The book concludes by outlining principles and methods for psychoanalytic research in the wider contexts of infant observational studies, society, and culture. Michael Rustin provides a unifying account of the methodological principles that underlie the generation of knowledge in

psychoanalysis, in the light of recent developments in the philosophy and sociology of science. In doing so, it provides a coherent rationale for psychoanalytic investigation, which will be of value to those pursuing research in this field. Researching the Unconscious is unusual in its being based both on a deep understanding of and respect for psychoanalytical clinical practice and on its author's wider knowledge of the philosophy and sociology of science. It is unique in its comprehensive approach to the principles of psychoanalytic research. psychology and pivotal for intellectual, cultural, and religious history. The writings presented here, spanning five decades, embody Jung's attempt to establish an interdisciplinary science of analytical psychology, and apply its insights to the fields of psychiatry, criminology, psychotherapy, psychoanalysis, personality psychology, anthropology, physics, biology, education, the arts and literature, the history of the mind and its symbols, comparative religion, alchemy, and contemporary culture and politics, among others: each in turn has been decisively marked by his thought. Of timely and ongoing relevance to the understanding of these fields, Jung's writings are at the same time essential reading for any

As an associate of C. G. Jung for many years, Jolande Jacobi is in a unique position to provide an interpretation of his work. In this volume, Dr. Jacobi presents a study of three central, interrelated concepts in analytical psychology: the individual complex, the universal archetype, and the dynamic symbol.

The concept of 'Archetypes' and the hypothesis of 'A Collective Unconscious' are two of Jung's better known and most exciting ideas. In this volume - taken from the Collected Works and appearing in paperback for the first time - Jung describes and elaborates the two concepts. Three essays establish the theoretical basis which are

then followed by essays on specific archetypes. The relation of these to the process of individuation is examined in the last section. The Archetypes and the Collective Unconscious is one of Jung's central works. There are many illustrations in full colour.

This comparative study of the basic concepts of Freud and Jung is designed to give a comprehensive understanding of Jung's work. The author traces the development of Jung from his initial fascination with Freud's ideas to his gradual liberation from these powerful concepts and the final breakthrough into his own unique theories of man and the cosmos. Jung's fundamental view is that the psyche is a totality

of conscious and unconscious elements that seeks to realize itself and stands in sharp contrast to Freud's early view of the psyche as primarily the effect of prior causes. Hence Freud tends to stress the pathological, whereas Jung looks to the creative and self-transcending aspects of human nature. The final section of the book describes the development of Jung's ideas after the death of Freud, particularly his concept of the archetypes.

This is a book of two parts: the first focuses on theoretical concepts with special reference to the structure of the psyche, while the second includes more clinical material. Both exemplify the London Society's interest in childhood and the development of ideas about the use of reductive analysis within the Jungian framework.

The author offers exploration of self and practical guidance dealing with the dark side of personality based on Jung's concept of "shadow," or the forbidden and unacceptable feelings and behaviors each of us experience.

The Origins and History of Consciousness draws on a full range of world mythology to show how individual consciousness undergoes the same archetypal stages of development as human consciousness as a whole. Erich Neumann was one of C. G. Jung's most creative students and a renowned practitioner of analytical psychology in his own right. In this influential book, Neumann shows how the stages begin and end with the symbol of the Uroboros, the tail-eating serpent. The intermediate stages are projected in the universal myths of the World Creation, Great Mother, Separation of the World Parents, Birth of the Hero, Slaying of the

The origins of the concept can be traced to his very first publication in 1902 and it remained central to his thought throughout his life. As well as explaining the theoretical background behind the idea, in Four Archetypes Jung describes the four archetypes that he considers fundamental to the psychological make-

This is the first paperback publication of this key work in its revised and augmented second edition of 1966. The earliest versions of the Two Essays, "New Paths in Psychology" (1912) and "The Structure of the Unconscious" (1916), discovered among Jung's posthumous papers, are published in an appendix, to show the development of

Durchschlag's unique study considers the links between expressions of the collective unconscious, such as myth, fairy tales, folk tales, and 'big dreams', and the experiences of those diagnosed with severe mental illnesses, such as schizophrenia and bipolar disorder. The author's personal narrative account of a psychotic episode is at its heart, bringing both an intimate foundation and exceptional insight to the book. Jung started a unique self- experiment that he called his “confrontation with the unconscious”: an engagement with his fantasies in a waking state, which he charted in a series of notebooks referred to as The Black Books. These intimate writings shed light on the further elaboration of Jung’s personal cosmology and his attempts to embody insights from his self- investigation into his life and personal relationships.
