

Dissertation For Mmed Obstetrics And Gynaecology And

Every year, hundreds of thousands of young people pack their bags to study or volunteer abroad. Well-intentioned and curious Westerners--brought up to believe that international travel broadens our horizons--travel to low-income countries to learn about people and cultures different from their own. But while travel abroad can provide much-needed perspective, it can also be deeply unsettling, confusing, and discomfiting. Travelers can find themselves unsure about how to think or speak about the differences in race or culture they find, even though these differences might have fueled their desire to travel in the first place. *Beyond Guilt Trips* helps us to unpack our Western baggage, so that we are better able to understand our uncomfortable feelings about who we are, where we come from, and how much we have. Through engaging personal travel stories and thought-provoking questions about the ethics and politics of our travel, *Beyond Guilt Trips* shows readers ways to grapple with their discomfort and navigate differences through accountability and connection.

Universities and economic development in Africa: Pact, academic core and coordination draws together evidence and synthesises the findings from eight African case studies. The three key findings presented in this report are as follows: 1. There is a lack of clarity and agreement (pact) about a development model and the role of higher education in development, at both national and institutional levels. There is, however, an increasing awareness, particularly at government level, of the importance of universities in the global context of the knowledge economy. 2. Research production at the eight African universities is not strong enough to enable them to build on their traditional undergraduate teaching roles and make a sustained contribution to development via new knowledge production. A number of universities have manageable student-staff ratios and adequately qualified staff, but inadequate funds for staff to engage in research. In addition, the incentive regimes do not support knowledge production. 3. In none of the countries in the sample is there a coordinated effort between government, external stakeholders and the university to systematically strengthen the contribution that the university can make to development. While at each of the universities there are exemplary development projects that connect strongly to external stakeholders and strengthen the academic core, the challenge is how to increase the number of these projects. The project on which this report is based forms part of a larger study on Higher Education and Economic Development in Africa, undertaken by the Higher Education Research and Advocacy Network in Africa (HERANA). HERANA is coordinated by the Centre for Higher Education Transformation in South Africa.

The revised, updated Fourth Edition of this popular handbook provides practical, accessible information on all aspects of dialysis, with emphasis on day-to-day management of patients. Chapters provide complete coverage of hemodialysis, peritoneal dialysis, special problems in dialysis patients, and problems pertaining to various organ systems. This edition reflects the latest guidelines of the National Kidney Foundation's Kidney Disease Outcomes Quality Initiative (KDOQI) on hemodialysis and peritoneal dialysis adequacy and on nutrition. New chapters cover chronic kidney disease management in predialysis patients, frequent daily or nocturnal hemodialysis, and hemodiafiltration. Chapters on venous and arteriovenous access have been completely revised. Each chapter provides references to relevant Web sites.

This book helps doctors to learn the basic sciences for obstetrics and gynaecology and to pass the MRCOG Part 1 exam by extending the reader's knowledge and understanding of the basic medical sciences and their relevance to obstetrics and gynaecology.

This book entitled *Colposcopy and Cervical Pathology* is the third successful book of the editor with InTech publishers. This book serves the purpose of providing, valuable and valid, innovative ideas/suggestions for utilizations of the "resource-rich/resource-intensive" colposcopy and cervical pathology technology in a "cost-/resource-effective" way by the health providers and planners, especially in "resource-limited/resource-poor settings." Transfer of technology from high- to low-resource settings in all the programs of preventive/community oncology services, across the world, is highly recommended and strongly advocated. The authors have well contributed to the goal of advanced science being made accessible for the benefit of common man. The InTech publishers have the distinct honor of imbibing the in-depth knowledge and vast experiences from experts of international repute and infusing it to the health providers and planners of developing countries, so that the communities of all nations are richly benefited. The book is a pearl, which deserves a precious and purposeful planning model for achieving "global health by education and empowerment."

Medical Cell Biology, Third Edition, focuses on the scientific aspects of cell biology important to medical students, dental students, veterinary students, and prehealth undergraduates. With its National Board-type questions, this book is specifically designed to prepare students for this exam. The book maintains a concise focus on eukaryotic cell biology as it relates to human and animal disease, all within a manageable 300-page format. This is accomplished by explaining general cell biology principles in the context of organ systems and disease. This updated version contains 60% new material and all new clinical cases. New topics include apoptosis and cell death from a neural perspective; signal transduction as it relates to normal and abnormal heart function; and cell cycle and cell division related to cancer biology. 60% New Material! New Topics include: Apoptosis and cell death from a neural perspective Signal transduction as it relates to normal and abnormal heart function Cell cycle and cell division related to cancer biology All new clinical cases Serves as a prep guide to the National Medical Board Exam with sample board-style questions (using Exam Master(R) technology): www.exammaster.com Focuses on eukaryotic cell biology as it related to human disease, thus making the subject more accessible to pre-med and pre-health students

For four decades, Makerere University, known as the "Oxford of Africa," was the sole university-level institution in all of East Africa. A fabled Mecca for aspiring youth, it trained many of the region's first generation of intellectual and political leaders, including the present presidents of Kenya and Tanzania. It remains one of Africa's most important universities today. As one of the first comprehensive look at an African university, this book tells the story of Makerere's colonial beginnings, its efflorescence during the 1950s and 1960s, its calamitous decline during nearly two decades of tyranny and civil war, and its resurgence following the restoration of peace and relative stability.

Now updated with new data and examples throughout, Clinical Epidemiology: Principles, Methods, and Applications for Clinical Research, Second Edition is a comprehensive resource that introduces the reader to the basics of clinical epidemiology and explores the principles and methods that can be used to obtain quantitative evidence on the effects of interventions and on the diagnosis, etiology, and prognosis of disease. The everyday challenges of clinical research and the quantitative knowledge required to practice medicine are also examined, making this book a valuable reference for both graduate and undergraduate students in medicine and related disciplines, as well as for professionals involved in the design and conduct of clinical research.

Now in its fifth edition, the Textbook of Diabetes has established itself as the modern, well-illustrated, international guide to diabetes. Sensibly organized and easy to navigate, with exceptional illustrations, the Textbook hosts an unrivalled blend of clinical and scientific content. Highly-experienced editors from across the globe assemble an outstanding set of international contributors who provide insight on new developments in diabetes care and information on the latest treatment modalities used around the world. The fifth edition features an array of brand new chapters, on topics including: Ischaemic Heart Disease Glucagon in Islet Regulation Microbiome and Diabetes Diabetes and Non-Alcoholic Fatty Liver Disease Diabetes and Cancer End of Life Care in Diabetes as well as a new section on Psychosocial aspects of diabetes. In addition, all existing chapters are fully revised with the very latest developments, including the most recent guidelines from the ADA, EASD, DUK and NICE. Includes free access to the Wiley Digital Edition providing search across the book, the full reference list with web links, illustrations and photographs, and post-publication updates Via the companion website, readers can access a host of additional online materials such as: 200 interactive MCQ's to allow readers to self-assess their clinical knowledge every figure from the book, available to download into presentations fully searchable chapter pdfs Once again, Textbook of Diabetes provides endocrinologists and diabetologists with a fresh, comprehensive and multi-media clinical resource to consult time and time again.

In the United States, over half of pregnant women receive some form of anesthesia for their deliveries; this translates into well over 2 million anesthetics per year. With this new handbook, anesthesiologists have easy access to step-by-step, to-the-point information on how to manage patients in specific situations. Every aspect of obstetric anesthesia practice is covered, including patient evaluation, anesthesia for labor and delivery, anesthesia for cesarean delivery, management of patients with concurrent medical problems, management of obstetric emergencies, fetal assessment, and neonatal resuscitation. Distilled, synthesized text is complemented by a generous number of tables, charts, figures and flow diagrams, all presented in accessible handbook format. Obstetric Anesthesia is an ideal introduction to the specialty as well as an essential daily guide for obstetric patient care and management.

Comprehensive Biomedical Physics is a new reference work that provides the first point of entry to the literature for all scientists interested in biomedical physics. It is of particularly use for graduate and postgraduate students in the areas of medical biophysics. This Work is indispensable to all serious readers in this interdisciplinary area where physics is applied in medicine and biology. Written by leading scientists who have evaluated and summarized the most important methods, principles, technologies and data within the field, Comprehensive Biomedical Physics is a vital addition to the reference libraries of those working within the areas of medical imaging, radiation sources, detectors, biology, safety and therapy, physiology, and pharmacology as well as in the treatment of different clinical conditions and bioinformatics. This Work will be valuable to students working in all aspect of medical biophysics, including medical imaging and biomedical radiation science and therapy, physiology, pharmacology and

treatment of clinical conditions and bioinformatics. The most comprehensive work on biomedical physics ever published Covers one of the fastest growing areas in the physical sciences, including interdisciplinary areas ranging from advanced nuclear physics and quantum mechanics through mathematics to molecular biology and medicine Contains 1800 illustrations, all in full color This manual encompasses a comprehensive approach to the management of labour. Based on the simple proposition that effective uterine action is the key to normal delivery, Active Management of Labour covers all aspects of delivery for nulliparous women with vertex presentation and single foetus. This is an accessible and practical guide for obstetricians and midwives as well as anaesthetists and the auxiliary staff of maternity units. Encourages an active interest in labour by all professional staff Emphasises the importance of constant personal attention and good communication in labour Discusses in detail the need to distinguish between: - first and subsequent births - single cephalic and all other pregnancies - induction and acceleration of labour Fosters the development of a team spirit between midwife and obstetrician Demonstrates how good labour ward organisation can improve care Proves the importance of audit in ensuring quality of care Updated chapters on dystocia and caesarean section New key points summary at the end of each chapter Updated review of clinical outcomes at the National Maternity Hospital

This is a new book on the integrated management of vulvovaginal disease. The authors come from a variety of backgrounds - gynaecology, dermatology, pathology and psychology - and describe a multidisciplinary approach to these conditions. The book has the most complete classification of vulvovaginal disease published, based on the etiology of 275 conditions; coverage includes benign, malignant, and functional (including psychosexual) diseases. Each disease has a descriptive summary, pathological features, and treatment guidelines. The book is illustrated in full color throughout.

The Fifth Edition of the highly praised Practical Guide for Medical Teachers provides a bridge between the theoretical aspects of medical education and the delivery of enthusiastic and effective teaching in basic science and clinical medicine. Healthcare professionals are committed teachers and this book is an essential guide to help them maximise their performance. This highly regarded book recognises the importance of educational skills in the delivery of quality teaching in medicine. The contents offer valuable insights into all important aspects of medical education today. A leading educationalist from the USA joins the book's editorial team. The continual emergence of new topics is recognised in this new edition with nine new chapters: The role of patients as teachers and assessors; Medical humanities; Decision-making; Alternative medicine; Global awareness; Education at a time of ubiquitous information; Programmatic assessment; Student engagement; and Social accountability. An enlarged group of authors from more than 15 countries provides both an international perspective and a multi-professional approach to topics of interest to all healthcare teachers.

Getting the right diagnosis is a key aspect of health care - it provides an explanation of a patient's health problem and informs subsequent health care decisions. The diagnostic process is a complex, collaborative activity that involves clinical reasoning and information gathering to determine a patient's health problem. According to Improving Diagnosis in Health Care, diagnostic errors-inaccurate or delayed diagnoses-persist throughout all settings of care and continue to harm an unacceptable number of patients. It is likely that most people will experience at least one diagnostic error in their lifetime, sometimes with devastating consequences. Diagnostic errors may cause harm to patients by preventing or delaying appropriate treatment, providing unnecessary or harmful treatment, or resulting in psychological or financial repercussions. The committee concluded that improving the diagnostic process is not only possible, but also represents a moral, professional, and public health imperative. Improving Diagnosis in Health Care a continuation of the landmark Institute of Medicine reports To Err Is Human (2000) and Crossing the Quality Chasm (2001) finds that diagnosis-and, in particular, the occurrence of diagnostic errors-“has been largely unappreciated in efforts to improve the quality and safety of health care. Without a dedicated focus on improving diagnosis, diagnostic errors will likely worsen as the delivery of health care and the diagnostic process continue to increase in complexity. Just as the diagnostic process is a collaborative activity, improving diagnosis will require collaboration and a widespread commitment to change among health care professionals, health care organizations, patients and their families, researchers, and policy makers. The recommendations of Improving Diagnosis in Health Care contribute to the growing momentum for change in this crucial area of health care quality and safety.

WHO and UNICEF jointly developed this global strategy to focus world attention on the impact that feeding practices have on the nutritional status, growth and development, health, and thus the very survival of infants and young children. The strategy is the result of a comprehensive two-year participatory process. It is based on the evidence of nutrition's significance in the early months and years of life, and of the crucial role that appropriate feeding practices play in achieving optimal health outcomes. The strategy is intended as a guide for action; it identifies interventions with a proven positive impact; it emphasizes providing mothers and families the support they need to carry out their crucial roles, and it explicitly defines the obligations and responsibilities in this regards of governments, international organizations, and other concerned parties.

The goal of the present guideline is to consolidate guidance for effective interventions that are needed to reduce the global burden of maternal infections and its complications around the time of childbirth. This forms part of WHO's efforts towards improving the quality of care for leading causes of maternal

death especially those clustered around the time of childbirth in the post-MDG era. Specifically it presents evidence-based recommendations on interventions for preventing and treating genital tract infections during labour childbirth or puerperium with the aim of improving outcomes for both mothers and newborns. The primary audience for this guideline is health professionals who are responsible for developing national and local health protocols and policies as well as managers of maternal and child health programmes and policy-makers in all settings. The guideline will also be useful to those directly providing care to pregnant women including obstetricians midwives nurses and general practitioners. The information in this guideline will be useful for developing job aids and tools for both pre- and inservice training of health workers to enhance their delivery of care to prevent and treat maternal peripartum infections.

Evidence based practice is now widely accepted as a fundamental tenet of midwifery. The importance of evidence in defining midwifery policy and practice in the UK health system, and others, is acknowledged and enduring. While the development and evaluation of research in midwifery is well charted, the question of how such evidence is incorporated into practice has, to date, received less attention and discussion in the midwifery profession. Answering this need, Evidence Based Midwifery focuses on the dissemination and use of evidence for midwifery practice, and explores midwives' experiences in using the evidence base to inform policy and enhance clinical practice. Written by a highly-regarded and diverse group from the UK and international midwifery community, Evidence Based Midwifery addresses issues of relevance to all midwives whether clinical practitioners or educators, students or supervisors, researchers or managers. Issues that influence evidence based midwifery are discussed, and topics covered include problem based learning, implementation of evidence based guidelines and the involvement of service users. Edited by founder members of the Evidence Based Midwifery Network International collaboration with contributions from the UK, Greece, Canada and the Netherlands Primary focus on the incorporation of evidence into midwifery practice Real-life examples throughout

This is a reproduction of a book published before 1923. This book may have occasional imperfections such as missing or blurred pages, poor pictures, errant marks, etc. that were either part of the original artifact, or were introduced by the scanning process. We believe this work is culturally important, and despite the imperfections, have elected to bring it back into print as part of our continuing commitment to the preservation of printed works worldwide. We appreciate your understanding of the imperfections in the preservation process, and hope you enjoy this valuable book.

In response to changing market needs, The Grants Register has been substantially revised from previous editions for this, its 15th edition. With increased student and professional mobility world-wide, coverage in The Grants Register has been extended from the English speaking world to the whole world, making it the only truly international guide of its kind. The number of awards has increased by 25% from the last edition, with all the information supplied directly by the awarding body. To improve ease of use, the layout and field structure has also been completely update. This has included the introduction of new fields on the level of study, individual eligibility and applications procedures as well as additional contact details such as email and World Wide Web addresses. The indexes have also been completely revised, with the introduction of an internationally recognised subject index which simultaneously incorporates a geographical guide to eligibility. An alphabetical list of awards will also be given. Now significantly extended, The Grants Register continues to be the only complete guide to awards and grants for postgraduates, young professionals, mature students and advanced scholars.

This guide covers over 6000 awards and grants worldwide, for postgraduates, young professionals, mature students and advanced scholars. Information includes the frequency and value of awards, details of tenure, subjects covered, eligibility requirements and how and where to apply.

The aim of this book is to provide research ethics committee members with a resource that focuses on research ethics issues in Africa. The authors are currently active in various aspects of research ethics in Africa and the majority have been trained in the past by either the Fogarty International Center or Europe and Developing Countries Clinical Trial Partnership (EDCTP) sponsored bioethics training programmes .

The hidden curriculum (HC) in health professional education comprises the organizational and institutional contexts and cultural subtexts that shape how and what students learn outside the formal and intended curriculum. HC includes informal social processes such as role modeling, informal conversations and interactions among faculty and students, and more subterranean forces of organizational life such as the structure of power and privilege and the architectural layout of work environments. For better and sometimes for worse, HC functions as a powerful vehicle for learning and requires serious attention from health professions educators. This volume, of interest to medical and health professionals, educators, and students, brings together twenty-two new essays by experts in various aspects of HC. An introduction and conclusion by the editors contextualizes the essays in the broader history and literature of the field.

Reviews "This volume brings together excellent scholarship and innovative policy discussion to demonstrate the essential role of higher education in the development of Africa and of the world at large. Based on deep knowledge of the university system in several African countries, this book will reshape the debate on development in the global information economy for years to come. It should be mandatory reading for academics, policy-makers and concerned citizens, in Africa and elsewhere." Manuel Castells, Professor Emeritus, University of California at Berkeley, Laureate of the Holberg Prize 2012 and of the Balzan Prize 2013 "The dominant global discourse in higher education now focuses on 'world-class' universities – inevitably located predominantly in North America, Europe and, increasingly, East Asia. The rest of the world, including Africa, is left to play 'catch-up'. But that discourse should focus rather on the tensions, even contradictions, between 'excellence' and 'engagement' with which all

universities must grapple. Here the African experience has much to offer the high-participation and generously resourced systems of the so-called 'developed' world. This book offers a critical review of that experience, and so makes a major contribution to our understanding of higher education." Sir Peter Scott, former editor of Times Higher Education and Professor of Higher Education Studies, University College London, Institute of Education

In a single volume, the new edition of this guide provides coverage of the developments within the fast-changing field of professional, academic and vocational qualifications.

In 1996 the Institute of Medicine launched the Quality Chasm Series, a series of reports focused on assessing and improving the nation's quality of health care. Preventing Medication Errors is the newest volume in the series. Responding to the key messages in earlier volumes of the series – "To Err Is Human (2000), Crossing the Quality Chasm (2001), and Patient Safety (2004)" – this book sets forth an agenda for improving the safety of medication use. It begins by providing an overview of the system for drug development, regulation, distribution, and use. Preventing Medication Errors also examines the peer-reviewed literature on the incidence and the cost of medication errors and the effectiveness of error prevention strategies. Presenting data that will foster the reduction of medication errors, the book provides action agendas detailing the measures needed to improve the safety of medication use in both the short- and long-term. Patients, primary health care providers, health care organizations, purchasers of group health care, legislators, and those affiliated with providing medications and medication-related products and services will benefit from this guide to reducing medication errors.
