At the core of
the logic of

this book is
that states

By positioning
infrastructure
as a system,
there is a
presumption

Biogeography may be defined simply as the study of the geographical distribution of organisms, but this simple definition hides the great complexity of the subject.

Biogeography transcends classical subject areas and

Get Free Geography An Integrated Approach

involves a range of scientific disciplines that includes geography, geology and biology. Not surprisingly, therefore, it means rather different things to different people. Historically, the study of biogeography has been concentrated

Get Free Geography An Integrated Approach

into compartments at separate points along a spatio-temporal gradient. At one end of the gradient, ecological biogeography is concerned with ecological processes occurring over short temporal and small spatial scales, whilst at the

Get Free Geography An Integrated Approach

other end, historical biogeography is concerned with evolutionary processes over millions of years on a large, often global scale. Between these end points lies a third major compartment concerned with the profound effects of

Get Free Geography An Integrated Approach

Pleistocene
glaciations and how
these have affected
the distribution of
recent organisms.
Within each of these
compartments along
the scale gradient, a
large number of
theories,
hypotheses and
models have been
proposed in an

Get Free Geography An Integrated Approach

attempt to explain the present and past biotic distribution patterns. To a large extent, these compartments of the subject have been non-interactive, which is understandable from the different interests and backgrounds of the

Get Free Geography An Integrated Approach

various researchers.

Nevertheless, the distributions of organisms across the globe cannot be fully understood without a knowledge of the full spectrum of ecological and historical processes.

There are no degrees in biogeography and

Get Free Geography An Integrated Approach

today' s

biogeographers are primarily born out of some other discipline.
