Curriculum and Teaching Dialogue is the journal of the American Association of Teaching and Curriculum (AATC). An important historical event in the development of organizations dealing with the scholarly field of teaching and curriculum was the founding of the AATC on October 1, 1993. The members of the AATC believed that the time was long overdue to recognize teaching and curriculum as a basic field of scholarly study, to constitute a national learned society for the scholarly field of teaching and curriculum (teaching is the more inclusive

concept; curriculum is an integral part of teaching the "what to teach" aspect). Since its founding AATC has produced scholarship in teaching and curriculum and serves the general public through its conferences, journals, and the interaction of its members. The purpose of the organization was originally defined in Article 1, Section 2 of the AATC Constitution: "To promote the scholarly study of teaching and curriculum; all analytical and interpretive approaches that are appropriate for the scholarly study of teaching and curriculum shall be encouraged." Curriculum and Teaching Dialogue seeks to fulfill that mission.

A user-friendly presentation of the essential concepts and tools for calculating real costs and profits in personal finance. Understanding the Mathematics of Personal Finance explains how mathematics, a simple calculator, and basic computer spreadsheets can be used to break down and understand even the most complex loan structures. In an easy-to-follow style, the book clearly explains the workings of basic financial calculations, captures the concepts behind loans and interest in a step-by-step manner, and details how these steps can be implemented for practical purposes. Rather than simply providing investment and borrowing strategies, the author successfully equips readers with the skills needed to make

accurate and effective decisions in all aspects of personal finance ventures, including mortgages, annuities, life insurance, and credit card debt. The book begins with a primer on mathematics, covering the basics of arithmetic operations and notations, and proceeds to explore the concepts of interest, simple interest, and compound interest. Subsequent chapters illustrate the application of these concepts to common types of personal finance exchanges, including: Loan amortization and savings Mortgages, reverse mortgages, and viatical settlements Prepayment penalties Credit cards The book provides readers with the tools needed to calculate real costs and profits using various financial instruments. Mathematically inclined readers will enjoy the inclusion of mathematical derivations, but these sections are visually

developed nations with aging populations face similar problems. There will be fewer workers relative to retirees in coming decades and the elderly are also expected to live longer. The impact of these demographic changes in the United States is likely to be challenging, especially for America's system of social security. Solomon offers new perspectives on how to meet the future costs of social security without bankrupting the next generation or gravely damaging the U.S. economy. He also shows, more broadly, how to provide for the financial security of America's senior populations. Over the past two decades, primary responsibility for providing a financially adequate retirement has shifted from the federal government and employers to individuals. For most Americans, social security alone will not provide enough income. Most companies

have shed their pension plans for 401(k) plans, to which companies and employees contribute, and in which participants must make their own investment decisions. Consequently, achieving financial security in retirement has increasingly become one's personal responsibility. Solomon deals extensively with the politics of social security, past and present. He examines the presidential leadership of Franklin D. Roosevelt and Ronald Reagan, both of whom revived the nation's spirit in times of crisis, both of whom introduced economic policies that remain controversial to the present day. He also considers in detail contemporary efforts to rethink social security, focusing on fundamental reform of the social security system and the expansion and simplification of employer-sponsored retirement plans and individual retirement

An assessment of Oregon personal finance teachers' beliefs and recommendations for secondary personal finance curriculum was the major purpose of this survey. A questionnaire based on the concepts and subconcepts in the Oregon Personal Finance Education Guide was used for data collection. All Oregon personal finance teachers who taught the personal finance requirement

during 1975-1976 and 1976-1977 comprised the sample for this study. Four hundred questionnaires were sent and 182 questionnaires were returned, representing 45.5 percent of the population. The findings of this survey were based on these responses. Teachers responded from all school sizes and geographic areas of Oregon. The major disciplines represented were business education, home economics, mathematics, and social studies. Information received by the researcher was organized in three

sections. In the first section, the best combination of the two semesters required for the personal finance course was identified. With a choice of grades nine through 12, any combination of semesters at grades 11 and 12 received the support of 72.8 percent of the teachers. In the second section, the five major concepts and 29 subconcepts of the Personal Finance Education Guide were discussed. More specifically, the researcher sought answers to the following questions: 1. What concepts and

subconcepts are taught in the personal finance curriculum? 2. What concepts and subconcepts are needed in the personal finance curriculum? The five major concepts are: I. Employment and Income II. Money Management III. Credit IV. Purchase of Goods and Services V. Rights and Responsibilities in the Marketplace All major concepts were taught and perceived as needed by more than 85 percent of the personal finance teachers except Concept I, Employment and Income. Forty two percent of the respondents stated

this concept was not taught, while 33 percent felt it was not needed. While these teachers saw a need for this information in the high school curriculum, they stated that it was or should be taught in the career education course. Comments concerning the concepts, the subconcepts, and the Guide as a whole were also included in this discussion. These remarks covered addition, deletions and organization of the material. The most requested addition was taxation, with 44 separate comments. Suggestions included

federal, state, and local taxes; income, property, and inheritance taxes; appropriate methods of tax reporting; consequences of improper records; and uses of tax money at all levels. Fifty nine percent of the respondents requested a more definitive approach to Concept IV, Purchase of Goods and Services with specific units to include housing, transportation, and food. In section III of the survey the researcher hoped to find the most popular curriculum sequence for the two semester course. Only 62 percent of all

respondents completed this section. Those teachers who did respond suggested Concept I, Employment and Income, and Concept II, Money Management, be taught in the first semester. Concept III, Credit, and Concept V, Rights and Responsibilities in the Marketplace, belonged in the second semester, with Concept IV, Purchase of Goods and Services, appropriate for either semester. Those teachers who did not respond to this section gave two explanations: 1. If both semesters of the personal finance

requirement were taught in the same year, the curriculum sequence was unimportant. 2. Schools using the "unit topic" approach were able to separate concepts and subconcepts by semesters, but "process oriented" programs, where concepts and subconcepts overlapped, made semester divisions irrelevant. The Oregon Personal Finance Education Guide is scheduled for revision during 1978. The suggestions and recommendations of the secondary personal finance teachers, as presented in this survey, will be used in this

Math for Business & Finance: An Algebraic Approach provides modern examples for students to understand business mathematics and make connections with real-world applications. The course covers mathematical concepts from an algebraic approach, combined with Business applications. Every chapter is devoted to a Personal Finance theme, with topics that include Payroll and the Cost of Purchasing a Home. There is also extensive integration of scientific calculator notation, and also has the Wall Street Journal and Kiplinger news clips that have been widely popular in Jeffrey Slater's other two Business Math texts.

Applied Mathematics for Personal Finance provides a general introduction to the ways that mathematics can be applied to personal financial decision-making. This book is suitable for college students with no previous background in economics or finance; only familiarity with high school algebra is assumed. This book demonstrates how you can utilize math skills you already know in application areas that may be unfamiliar; it also introduces some new math skills that you

can apply to familiar problems. The book emphasizes the development and application of the economic life-cycle model as the framework for evaluating all of your personal financial decisions. Economists, including six Nobel Laureates, have spent close to a century developing the concept of life-cycle consumption smoothing. "Smoothing" refers to the need to spread your economic resources over your lifetime, taking into account that your future is highly uncertain.
