Already a regional and global centre for business and finance, Dubai's reputation has been bolstered by the MSCI's decision to upgrade the UAE from frontier to emerging market status in 2014, while the emirate's successful Expo 2020 bid is expected to generate myriad opportunities for private investors across a range of sectors. Construction is thriving once again, driven in large part by strong retail sector growth, with various projects, including plans for the world's largest mall, indicating that the sector will maintain its position as the emirate's biggest GDP contributor moving forward. The transport and logistics framework is set for major expansion in the coming years as well, furthering cementing the emirate's status as a leading transport and logistics hub not just regionally, but globally too. The continued development of Dubai's retail and hospitality offerings, alongside the upgrades to its airports, should help to ensure robust growth in visitor numbers from both the region and further afield.

India: A land of 1.2 billion consumers and mammoth potential. Ranks in the world's top 10 countries in terms of GDP. How do some companies win big in this market? Why do many companies fail to go after the big opportunities? What are the new growth strategies that can triumph in this diverse market? Leading companies have succeeded in India not necessarily by unleashing unique technology or better products, but by their ability to competently consummate the last mile as an inevitable ingredient, even an architect, of their success. This book provides a disruptive approach to successfully create and capture "undiminished" potential of a billion-consumer market.

The downhill slide in the global price of crude oil, which started mid-2014, had major repercussions across the Middle East for net oil exporters, as well as importers closely connected to the oil-producing countries from the Gulf. Following the Arab uprisings of 2010 and 2011, the oil price decline represented a second major shock for the region in the early twenty-first century – one that has continued to impose constraints, but also provided opportunities. Offering the first comprehensive analysis of the Middle Eastern political economy in response to the 2014 oil price decline, this book connects oil market dynamics with an understanding of socio-political changes. Inspired by rentierism, the contributors present original studies on Bahrain, Egypt, Jordan, Kuwait, Lebanon, Oman, Qatar, Saudi Arabia, and the United Arab Emirates. The studies reveal a large diversity of country-specific policy adjustment strategies: from the migrant workers in the Arab Gulf, who lost out in the post-2014 period but were incapable of repelling burdensome adjustment policies, to Egypt, Jordan, and Lebanon, who have never been able to fulfil the expectation that they could benefit from the 2014 oil price decline. With timely contributions on the COVID-19-induced oil price crash in 2020, this collection signifies that rentierism still prevails with regard to both empirical dynamics in the Middle East and academic discussions on its political economy. Both famous and infamous, Dubai features burgeoning financial districts, waterfront high-rises, and tax-free shopping malls right alongside the serene Gulf coast. But as the city charges into the future, it keeps a watchful eye on its Arabian legacy. Themed hotels and desert resorts celebrate cherished notions of local hospitality, while new art galleries, theaters, and performance venues tap into a newfound thirst for cultural stimulation. Written by knowledgeable locals, Time Out Dubai profiles a wealth of options for the visitor, from haute hotels and elegant restaurants to modest digs and street food stalls. The book covers every inch of the city and its often extraordinary surroundings, from the iconic The World islands to quirkier districts including historical Bastakia, cut-price Karama, and the ever-bustling Sheikh Zayed Road.

Around the world, mass transit is struggling to compete with the private automobile. Yet a number of metropolitan areas have in recent decades managed to mount cost-effective and resource-conserving transit services that provide alternatives to car travel. What sets these places apart? Noted transportation expert Robert Cervero provides an on-the-ground look at more than a dozen mass transit success stories, introducing the concept of the "transit metropolis"--a region where a workable fit exists between transit services and urban form.

This volume presents innovative work on innovative methods, tools and practices aimed at supporting the transition of Asian and Middle Eastern cities and regions towards a more smart and sustainable dimension. The role of the built and urban environment are becoming more pronounced in Asia and Middle East as the regions continues to experience rapid increase in population and urbanisation, which have only led to an increase in environmental degradation but also rise in energy consumption and emissions. Individual chapters covers timely topics such as sustainable infrastructure, transportation, renewable energy, water and methods supporting an innovative and sustainable development of urban areas. Real-world examples are presented to highlight recent developments and advancements in design, construction and transportation infrastructures. The volume is based on the best contributions to the 2nd GeoMEast International Congress and Exhibition on Sustainable Civil Infrastructures, Egypt 2018 – The official international congress of the Soil-Structure Interaction Group in Egypt (SSIGE).

Yasser Elsheshtawy explores Dubai 's history from its beginnings as a small fishing village to its place on the world stage today, using historical narratives, travel descriptions, novels and fictional accounts by local writers to bring colour to his history of the city 's urban development. With the help of case studies and surveys this book explores the economic and political forces driving Dubai 's urban growth, its changing urbanity and its place within the global city network. Uniquely, it looks beyond the glamour of Dubai 's mega-projects, and provides an in-depth exploration of a select set of spaces which reveal the city 's 'inner life '.

From desert sands to a glittering metropolis: the inside story of Dubai 's transformation. In just two decades; Dubai has reinvented itself from a small; poor and quiet fishing village to a dazzling city with a vibrant urban life. How did this happen? Home to more than 200 nationalities—particularly those from the Indian subcontinent—the emirate 's choice to welcome expatriates has paid off. Cultivating an open and welcoming culture; Dubai manages to attract people from all over the world; heartily embracing any entrepreneurial contribution they wish to make. The emirate is now also known for its cosmopolitan melting-pot culture; and its enabling environment to conduct business; and this; along with the tax-free system and hassle-free infrastructure; makes it a much sought-after site for multinational enterprises who want a base in Asia. Unlike the Gulf emirates that can count on petroleum wealth; Dubai has wound its way to

prosperity by planning carefully and executing those plans methodically. Its airline and luxury construction have made it a popular destination for luxury tourism. Projects like the Burj al-Arab; the Palm Jumeriah and the Burj Khalifa; along with events like the world's richest horserace—the Dubai World Cup—and the Dubai Shopping Festival; have sustained tourist interest and focused the world's attention on the emirate. Pranay Gupte draws on his deep knowledge of the region and its leading personalities to trace the city-state's extraordinary and fabulous journey.

This handbook of urban transportation planning presents case studies detailing 40 best practices from 33 states in the U.S. and 19 countries on six continents. Cities around the world have improved transportation options for their citizens. Roadways have seen the addition of walkways and bicycle lanes, and light-rail transit systems have reduced street traffic. These cities have decreased reliance on personal cars and enhanced their urban environments by reducing congestion, pollution, and the number and width of roadways. This volume discusses the dynamic field of urban transportation planning and provides resources for planning professionals and public officials interested in obtaining additional information on the latest trends.

Dubai has continued to meet its targets in becoming the global capital of Islamic finance, nearly doubling the number of sukuk (Islamic bonds) listings on its exchanges since 2017. Furthermore, eased policy restrictions to encourage foreign investment and the 2019 budget's continued commitment to infrastructure development ahead of Expo 2020 are expected to continue driving economic activity. As one of the most diversified economies in the region, Dubai continues to present growth opportunities in various sectors including tourism, logistics, manufacturing and education. Although the emirate has benefitted from its proximity to oil and gas fields, Dubai is right at the forefront of the emerging cleaner energy world, and developing and promoting renewable technologies, including solar energy and electric vehicles.

The field of e-Government has emerged alongside the developments in information technology in recent decades, and has become an increasingly important factor in all our lives. It has faced a wide range of challenges from the changing technologies of the internet/digital economy, such as IOT, big data, cloud and 4G mobile, as well as the rapid growth of ICT innovations and applications. The Institute of e-Government at Waseda University, Japan, was established in 2001, and this book is the latest in the series of e-Government ranking surveys published by the Institute since 2005. The second part covers findings and trends, and includes analysis in the fields of digital/internet economy, IOT, cloud, open/big data, cyber security, smart cities, social media and e-aging. Since the late eighteenth century, academic engagement with political, economic, social, cultural and spatial changes in our cities has been dominated by theoretical frameworks crafted with reference to just a small number of cities. This book offers an important antidote to the continuing focus of urban studies on cities in 'the Global North'. Urban Theory Beyond the West contains twenty chapters from leading scholars, raising important theoretical issues about cities throughout the world. Past and current conceptual developments are reviewed and organized into four parts: 'De-centring the City' offers critical perspectives on re-imagining urban theoretical debates through consideration of the diversity and heterogeneity of city life; 'Order/Disorder' focuses on the political, physical and everyday ways in which cities are regulated and used in ways that confound this ordering; 'Mobilities' explores the movements of people, ideas and policy in cities and

between them and 'Imaginarities' investigates how urbanity is differently perceived and experienced. There are three kinds of chapters published in this volume: theories generated about urbanity 'beyond the West'; critiques, reworking or refining of 'Western' urban theory based upon conceptual reflection about cities from around the world and hybrid approaches that develop both of these perspectives. Urban Theory Beyond the West offers a critical and accessible review of theoretical developments, providing an original and groundbreaking contribution to urban theory. It is essential reading for students and practitioners interested in urban studies, development studies and geography.
