In *Drunk on Genocide*, Edward B. Westermann reveals how, over the course of the Third Reich, scenes involving alcohol consumption and revelry among the SS and police became a routine part of rituals of humiliation in the camps, ghettos, and killing fields of Eastern Europe. Westermann draws on a vast range of newly unearthed material to explore how alcohol consumption served as a literal and metaphorical lubricant for mass murder. It facilitated "performative

masculinity," expressly linked to physical or sexual violence. Such inebriated exhibitions extended from meetings of top Nazi officials to the rank and file, celebrating at the grave sites of their victims.

Westermann argues that, contrary to the common misconception of the SS and police as stone-cold killers, they were, in fact, intoxicated with the act of murder itself. *Drunk on Genocide* highlights the intersections of masculinity, drinking ritual, sexual violence, and mass murder to expose the role of alcohol and celebratory ritual in the Nazi genocide of European Jews. Its surprising and disturbing findings offer a new perspective on the mindset, motivation,

and mentality of killers as they prepared for, and participated in, mass extermination. Published in Association with the US Holocaust Memorial Museum. This volume analyses the image of 'the Jew' as it developed and transformed in both Czech and Slovak society under the nondemocratic regimes of the twentieth century. It is the first serious attempt to offer a comparative analysis of anti-Jewish prejudices in the Czech and Slovak mindset between 1938 and 1989.

Winner of the Best Book in Human Rights (ISA) In *Making and Unmaking Nations*, Scott Straus seeks to explain why and how genocide takes place—and, perhaps more important, how it has been avoided in places where it may have seemed likely or even inevitable. To solve that puzzle, he examines postcolonial Africa, analyzing countries in which genocide occurred and where it could have but did not. Why have there not been other Rwandas? Straus finds that deep-rooted ideologies—how leaders make their nations—shape strategies of violence and are central to what leads to or away from genocide. Other critical factors include the dynamics of war, the role of

restraint, and the interaction between national and local actors in the staging of campaigns of large-scale violence. Grounded in Straus's extensive fieldwork in contemporary Africa, the study of major twentieth-century cases of genocide, and the literature on genocide and political violence, *Making and Unmaking Nations* centers on cogent analyses of three nongenocide cases (Côte d'Ivoire, Mali, and Senegal) and two in which genocide took place (Rwanda and Sudan). Straus's empirical analysis is based in part on an original database of presidential speeches from 1960 to 2005. The book also includes a broad-gauge analysis of all major cases of large-scale violence in

Nazi dictatorship, both in the existing territories of Germany, and in the area seized by the German army during World War II. In this 2001 book Harold James uses new and previously unavailable materials, many from the bank's own archives, to examine policies which led to the eventual genocide of European Jews. How far did the realization of the vicious and destructive Nazi ideology depend on the acquiescence, the complicity, and the cupidity of existing economic institutions, and individuals? In response to the traditional view that business co-operation with the Nazi regime was motivated by profit, this book closely examines the behaviour of the bank and its individuals

to suggest other motivations. No comparable study exists of a single company's involvement in the economic persecution of the Jews in Nazi Germany. Healthcare decision makers in search of reliable information that compares health interventions increasingly turn to systematic reviews for the best summary of the evidence. Systematic reviews identify, select, assess, and synthesize the findings of similar but separate studies, and can help clarify what is known and not known about the potential benefits and harms of drugs, devices, and other healthcare services. Systematic reviews can be helpful for clinicians who want to integrate research findings into

their daily practices, for patients to make well-informed choices about their own care, for professional medical societies and other organizations that develop clinical practice guidelines. Too often systematic reviews are of uncertain or poor quality. There are no universally accepted standards for developing systematic reviews leading to variability in how conflicts of interest and biases are handled, how evidence is appraised, and the overall scientific rigor of the process. In *Finding What Works in Health Care* the Institute of Medicine (IOM) recommends 21 standards for developing high-quality systematic reviews of comparative effectiveness research. The

standards address the entire systematic review process from the initial steps of formulating the topic and building the review team to producing a detailed final report that synthesizes what the evidence shows and where knowledge gaps remain. Finding What Works in Health Care also proposes a framework for improving the quality of the science underpinning systematic reviews. This book will serve as a vital resource for both sponsors and producers of systematic reviews of comparative effectiveness research.
